

Samsung QM Series Display Configuration

Daily On/Off Power Schedule — Menu Board IT Reference

This document outlines the steps to set up an automatic daily power on/off schedule for Samsung QM Series digital signage displays used as menu boards. This ensures displays operate only during business hours, saving energy and extending hardware lifespan.

Model	Brightness
Samsung SMG QB55B	300 nit
Samsung SMG QM55C	500 nit

Procedure

Step 1 — Access the Display Menu

- Using the remote control press the Menu button.
- Navigate to the System or Settings section (naming may vary by firmware).

Step 2 — Navigate to Power Control Settings

- Within the System or Settings menu locate and select Power Control.

Step 3 — Configure the Following Settings

- Auto Power On → Off
- Max. Power Saving → Off
- Standby Control → Off
- Remote Configuration → Off
- Power Button → Power On Only

Step 4 — Verify and Exit

- Review all settings to confirm they are correctly configured.
- Exit the menu by pressing Exit or Return until you return to normal display.

Important Considerations

- Initial Setup: Ensure the display's internal clock is set correctly (found in System or General Settings).
- Content Management: This setting only controls display power. The content management system (Harmony) must be configured separately for correct content scheduling.
- Firmware: Periodically check for firmware updates as these can change menu layouts.
